Seeking Candidate for Pediatric Infectious Diseases, Associate Hospital Epidemiologist

Boston Children’s Hospital

The Division of Infectious Diseases at Boston Children’s Hospital in Boston, Massachusetts is seeking to recruit an outstanding pediatric ID physician for a position as Associate Hospital Epidemiologist. The successful applicant is expected to be interested in a career in hospital epidemiology and infection prevention and control. The position includes administrative leadership and hospital operations in infection prevention and clinical time on the ID consult service. There will also be an opportunity to participate in Antimicrobial Stewardship Program activities. The Infection Prevention and Control program has a full-time Hospital Epidemiologist and 5 infection preventionists; the Antimicrobial Stewardship Program has both a Medical Director and an ID pharmacist. In addition, both programs share a full-time data analyst. The BCH Division of Infectious Diseases has 31 faculty, 11 clinical fellows, and 42 research staff and post-doctoral fellows. Research in the division spans basic science, clinical investigation, and epidemiology and population health. This position provides the opportunity to work with national experts in pediatric infection prevention, develop leadership skills in hospital operations, and participate in research and quality improvement in pediatric infection prevention and antimicrobial stewardship. Rank is dependent upon qualifications. Applicants should be board certified/board eligible in pediatric infectious diseases. Interested applicants should forward their curriculum vitae and a cover letter detailing their interest to Tom Sandora, MD MPH: thomas.sandora@childrens.harvard.edu. www.childrenshospital.org. Boston Children’s Hospital is an Equal Opportunity/Affirmative Action Employer.
