Fellowship positions in Infectious Diseases of Immunocompromised Children and Adolescents

Infectious Diseases in Immunocompromised Patients and Transplant Infectious Diseases have emerged as subspecialties within Pediatric Infectious Diseases over the past 2 decades, reflecting the increasing volumes and complexity of this patient population. Increasing numbers of faculty positions focused on the care of immunocompromised hosts have become available, indicating an appreciation for expertise in this realm. The Department of Pediatric Infectious Diseases at St. Jude Children’s Research Hospital is pleased to offer fellowship positions in Infectious Diseases of Immunocompromised Children and Adolescents. This new program is intended for practitioners who have completed a Pediatric Infectious Diseases fellowship and who wish to gain additional expertise and experience in the diagnosis, management, and prevention of infections in this patient population.

The training program is a minimum of 12 months in duration and can be customized to meet participants’ individual learning goals. Participants have the opportunity to manage patients with a wide variety of infectious diseases on both an inpatient and an ambulatory basis. St. Jude Children’s Research Hospital provides care for over 500 new patients with cancer annually. A total of 30-40 allogeneic hematopoietic stem cell transplants are performed annually. More than 250 HIV-infected children and youth receive care and participate in numerous NIH and pharmaceutical industry studies yearly. Le Bonheur Children’s Hospital has a 40-year history of experience in pediatric transplant surgery, offering the only pediatric liver transplantation program in the Mid-South, a highly successful program in renal transplantation, and an expanding cardiac transplant program. Trainees also have opportunities to participate in antimicrobial stewardship, infection prevention and control, teaching and, for those who extend their training period for more than 12 months, research.

Fellows receive a professional development allowance, a personal computer for use during the fellowship, medical, dental and vision insurance (cost shared), and disability and group life insurance. Clinical trainees at St. Jude Children’s Research Hospital enjoy a superb environment in an institution that ranks in FORTUNE magazine’s “100 Best Companies to Work For” and “20 Best Workplaces in Health Care”. Memphis offers a relaxed, affordable lifestyle with excellent cultural and recreational amenities.
