Senior Clinician  
Director, Primary Immunodeficiency Clinic  
Laboratory of Clinical Immunology and Microbiology  
National Institute of Allergy and Infectious Diseases  
National Institutes of Health

The National Institute of Allergy and Infectious Diseases (NIAID), a major research component of the National Institutes of Health (NIH) and Department of Health and Human Services (HHS), is recruiting a physician (medical officer-clinical) who will serve as a senior clinician in the Laboratory of Clinical Immunology and Microbiology (LCIM).

This position is a leadership opportunity. The incumbent will serve as director of the NIAID Primary Immune Deficiency (PID) Clinic and lead a clinical research program in the etiology, pathogenesis, prevention, and/or treatment of PIDs. This clinic is internationally known for its expertise in recognizing new immune deficiencies and serves as a referral center for the management and study of immunodeficiencies in both inpatient and outpatient populations. The PID clinic supports a vibrant discovery program in the intramural NIH community to integrate clinical information from patient studies with fundamental research on the molecular determinants of immunological diseases. Many major academic contributions, spanning both basic and clinical science, have emerged from the LCIM program and its clinics.

The ideal candidate will be a physician with clinical expertise and leadership in the study of immunologic diseases, oversight of and management of complex patients, and the development and oversight of clinical protocols. Considerable clinical experience and a record for scholarly achievement is preferred. This position is ideal for a physician seeking to become a leader in this academic field. Applicants must be board certified by the American Board of Internal Medicine, American Board of Allergy and Immunology, or the American Board of Pediatrics and must hold a permanent, full, and unrestricted license to practice medicine in a state, the District of Columbia, the Commonwealth of Puerto Rico, or a territory of the United States.

In addition to clinical and administrative responsibilities related to the clinic, the incumbent will have resources to conduct clinical research including nurses, study coordinators, and nurse practitioners, as well as appropriate administrative resources. The studies will focus on pathogenesis, natural history, treatment, and prevention. Experience with institutional review board and Food and Drug Administration regulated trials is preferable.

Salary is commensurate with experience and accomplishments. The salary range for this position is $161,901 to $225,000. A full civil service package of benefits (including retirement; health, life, and long-term care insurance; Thrift Savings Plan; etc.) is available. Applicants must be U.S. citizens. Additional information regarding the LCIM (formerly the Laboratory of Clinical Infectious Diseases and Laboratory of Host Defense) or PID Clinic is available at:
